

CMP 412 AOC

NOTE PLEASE, BETTY DOESN'T KNOW THE QUESTIONS HE SET!!!

THESE QUESTIONS ARE THOSE HE EITHER ASKED IN CLASS, SAID IN CLASS, OR TOLD US TO PREPARE FOR EXAM.

READ OTHER MATHERIAL GIVEN BY PROF.

SUCCESS

You can make use of any programming language of your choice. Eg: Python, C++, etc.

Code 1

Write a code to show the communication between the client and the server side. In your code, the client should ask for the time.

Code 2

Write a code for the communication between one sever and one client

Code 3

Write a code for the communication between one server and multiple clients.

1. Given the IP address, find the class, and how many users are in that class.
I.s: Given 251.251.25.0, indicate the group, and indicate the number of users.
2. Given the following communication method: Unicast, Multicast, Broadcast. How can we implement it and what is the algorithm being used.
3. In Network Architecture, explain: Peer-to-Peer and client-to-server, you get to write a program where clients communicates with the server.
4. How does computer network work?
5. What's is Packet switching, and what is the technique behind packet switching
6. How are data broken into pieces, and reassembled back again without loosing those data?
7. Differentiate between IP Address version 4 and version 6
8. What are the types of data transmission? Explain Synchronization and Assynchronization
9. What is Network topology?
 - a. Explain mesh, bus, star, ring, butterfly, etc.
10. What is a Port number?

11. How does TCP work? And how does client and server work in it?
12. Differentiate between STDM and ATDM
13. Demonstrate Encryption
14. What is UDP, TCP, Port number, etc, and how does it work?
15. Difference between Data and Information.
16. Define sockets and its components
17. What are the groups of IP address 4, be able to identify the group of an IP address, know the calculation. Know the mask, host, etc.
18. How can you measure Network Performances using Delay time, response time, throughput
19. What is the formula for measuring network
20. What is robustness?
21. What is Encrypting & decrypting? And how is it done?
